Markdown literary programming Example

example01: Code with syntax highlighting.

```
(defn f [[evens odds total amax amin] x]

  (let [[evens odds] (cond
                        (even? x) [(inc evens ) odds]
                        (odd? x)  [evens (inc odds)]
                        :else      [evens odds])

        total (+ total x)
        amax  (max amax x)
        amin  (min amin x)]

    [evens odds total amax amin]))

;The comment of the code requires at least two line comment characters

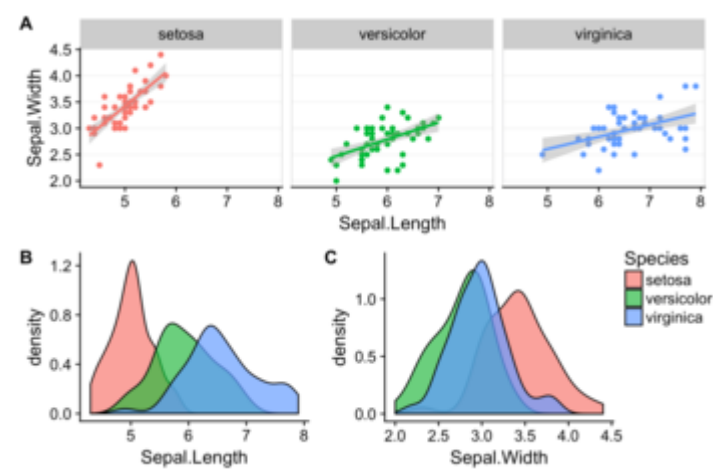

(reduce f [0 0 0 ##-Inf ##Inf] [5 6 8 -3 -9 11 156 6 7])

return [4 5 187 156 -9]
```
